Title : FOOD ORDERING KUIS

Academic Session : SESSION 1 2022/2023

I declare that this thesis is classified as:

**OPEN ACCESS**

☐

I agree that my thesis to be published as online  
open access (Full text)

I acknowledge that FSTM, KUIS reserve the right as follows:

1. The thesis and final prototype is the Property of FSTM, KUIS.
2. The library of KUIS has the right to make copies for the purpose of research only.
3. The library has the right to make copies of the thesis for academic exchange.

## **ACKNOWLEDGEMENTS**

First and foremost, all praises to Allah, the Almighty, for his blessing and giving us the inspiration to embark on this project. I would like to express my special thanks of gratitude to my supervisor Dr Syarbaini Ahmad as well as our FYP Coordinator Pn Siti Noor Binti Ahmad who gave me the golden opportunity to do this wonderful project on the topic Food Ordering KUIS, which also helped me in doing a lot of Research and I came to know about so many new things.

I am really thankful to them. Secondly, I would like to thank to my parents and friends who helped me a lot in finishing this project within the limited time.

I am making this project not only for the marks but to also increase my knowledge.

Thanks again to all who helped me.

## **ABSTRACT**

The objective developing Food Ordering KUIS project is to provide a friendly, easy to use website that can provide the customer with service. Nowadays, many restaurants in Malaysia still use manually, paper-based in food ordering system. The problem using manually are probability of paper lost is high and misinterpret the handwriting of order. Food Ordering KUIS is created to solved this problem. Methodology that be used in this project is a Prototype Model.

# **CHAPTER 1**

## **INTRODUCTION**

### **2.4 INTRODUCTION TO CHAPTER**

This chapter is about the overview of the project, problem statement, scope objective, problem analysis and conclusion of this project. There will be explanation on why this software needed to developed and what are the problem statement within this project and what is the scope covered. Food Ordering KUIS is an online ordering system. The idea of Food Ordering KUIS is it can be used to order food and beverage for customer so they can pick up their order within their selected time thru online platform.

### **1.2 PROJECT DESCRIPTION**

This project is about making an online ordering system for café in KUIS to make it easier for the customer to order food and beverage and make it easier for owners to organize the order. In addition, this project will help customer and owners greatly with their time because customer doesn't need to queue to order food. Now days the rapid growth in the use of internet and the technologies associated with it, the several opportunities are coming up on the web or mobile application.

### **1.3 PROBLEM STATEMENT**

Food Ordering KUIS is designed to overcome those problems using manual system such as the possibility the paper order is high. Many cafés in KUIS use conventional system which is on paper-based, for food ordering process. Using conventional system, the cashier must jot down the order at the paper and send to the cook. The probability to make mistake was high because sometimes the cook misinterpret hand-writing order. Therefore, Food Ordering KUIS was developed to enhance the efficiency and accuracy of taking order in food ordering system. Besides that, conventional system cannot see the sales history therefore Food Ordering KUIS was designed to view the sales history of the café.

### **1.4 PROJECT OBJECTIVE**

- To computerized the food ordering system process.
- To display details of sales history.
- To calculated price of order.

### **1.5 PROJECT SCOPE**

The scope of the project are as the following:

- Including all café inside KUIS.
- For student, lecturer, café owner and staff use.
- The language used in this system are in English.

## **1.6 PROJECT CONTRIBUTIONS**

- Efficient ordering system to replace traditional ordering system.
- Café owners now can view their sales history.
- Order will be more organized.

## **1.7 CONCLUSION OF CHAPTER**

For conclusion, the main purpose of developing Food Ordering KUIS is to make it easier for the customer to order food and beverage and make it easier for owners to organize the order. Food Ordering KUIS is designed to overcome those problems using manual system. Food Ordering KUIS was developed to enhance the efficiency and accuracy of taking order in food ordering system.

## **CHAPTER 2**

### **LITERATURE REVIEW**

#### **2.1 INTRODUCTION TO CHAPTER**

This chapter is about the information needed, which information is needed and how the information obtained will be used in general. There will also be explanation on what do the researcher needs to develop this website and to make it more interesting.

#### **2.2 DOMAIN STUDIES**

Online food ordering is the process of ordering food for pickup from a website or app. The online food ordering can be concluded as the easiest and simplest way to order your food and beverage. This system for online food ordering is very popular method that is revolutionizing the way in which the food industry operates.

Functionality	Yes	Yes	Yes	Yes
Interface	Simple and easy to use	Simple and easy to use	Simple and easy to use	Simple and easy to use
Online payment	Have	Do not have	Do not have	Do no have

### 2.4.1 Comparison between existing system

## 12.0 TECNOLOGIES STUDIES

### 2.4.1 HTML

HTML, in full hypertext markup language, a formatting system for displaying material retrieved over the Internet. Each retrieval unit is known as a Web page (from World Wide Web), and such pages frequently contain hypertext links that allow related pages to be retrieved. HTML is the markup language for encoding Web pages. It was designed by the British scientist Sir Tim Berners-Lee at the CERN nuclear physics laboratory in Switzerland during the 1980s. HTML markup tags specify document elements such as headings, paragraphs, and tables. They mark up a document for display by a computer program known as a Web browser. The browser interprets the tags, displaying the headings, paragraphs, and tables in a layout that is adapted to the screen size and fonts available to it.

## 12.0.2 PHP

PHP started out as a small open source project that evolved as more and more people found out how useful it was. Rasmus Lerdorf unleashed the first version of PHP way back in 1994.

- PHP is a recursive acronym for “PHP: Hypertext Preprocessor”.
- PHP is a server side scripting language that is embedded in HTML. It is used to manage dynamic content, databases, session tracking, even build entire e-commerce sites.
- It is integrated with a number of popular databases, including MySQL, PostgreSQL, Oracle, Sybase, Informix, and Microsoft SQL Server.
- PHP is pleasingly zippy in its execution, especially when compiled as an Apache module on the Unix side. The MySQL server, once started, executes even very complex queries with huge result sets in record-setting time.
- PHP supports a large number of major protocols such as POP3, IMAP, and LDAP. PHP4 added support for Java and distributed object architectures (COM and CORBA), making n-tier development a possibility for the first time.
- PHP is forgiving: PHP language tries to be as forgiving as possible.
- PHP Syntax is C-Like.

## 12.0.2 MYSQL

A database is a structured collection of data. It may be anything from a simple shopping list to a picture gallery or the vast amounts of information in a corporate network. To add, access, and process data stored in a computer database, you need a database management system such as MySQL Server. Since computers are very good at handling large amounts of data, database management systems play a central role in computing, as standalone utilities, or as parts of other applications.

## 2.4.4 Bootstrap

Bootstrap is a free and open source front end development framework for the creation of websites and web apps. The Bootstrap framework is built on HTML, CSS, and JavaScript (JS) to facilitate the development of responsive, mobile-first sites and apps.

Responsive design makes it possible for a web page or app to detect the visitor's screen size and orientation and automatically adapt the display accordingly; the mobile first approach assumes that smartphones, tablets and task-specific Mobile apps are employees' primary tools for getting work done and addresses the requirements of those technologies in design.

Bootstrap includes user interface components, layouts and JS tools along with the framework for implementation. The software is available precompiled or as source code.

## **12.0 SOFTWARE AND HARDWARE SPECIFICATIONS**

### **2.5.1 SOFTWARE SPECIFICATIONS**

#### **12. Windows 11 Home Single Language**

##### **ii. Laragon Version 5.0.0.2**

##### **iii. Word**

##### **iv. Visual Studio Code**

##### **v. phpMyAdmin**

### 2.5.2 HARDWARE SPECIFICATIONS

The hardware specifications for this project are as below.

Device	Processor	Ram
LAPTOP-INBN43A4	IntelI CoreI i3-1005G1 CPU @ 1.20GHz 1.19 GHz	12.0 GB (11.7 GB usable)

2.5.2 Hardware specifications

### 2.6 CONCLUSION OF CHAPTER

In this chapter, overall about the literature review and why it is important to do this research. This research is very important to develop and maintain this project.

## CHAPTER 3

### METHODOLOGY

#### 3.1 INTRODUCTION OF CHAPTER

Firstly, in this chapter we will discuss about the methodology that will be use for Food Ordering KUIS. Then, we will also discuss on how to plan and make the project. Furthermore, in methodology, we will explain the methods of data collection, material used and etc.

#### 3.2 PROJECT METHODOLOGY

The Prototype model is one of the software development life cycle models in which a prototype is built with minimal requirements. This prototype is then tested and modified based on the feedback received from the client until a final prototype with desired functionalities gets created. This final prototype also acts as a base for the final product.

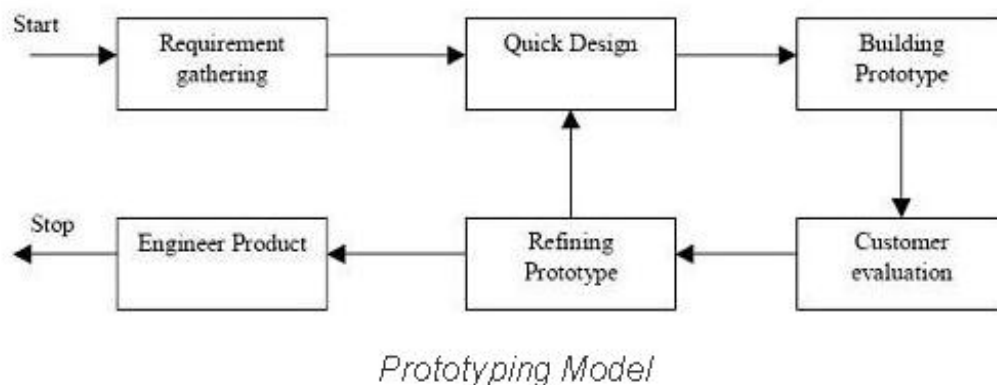

Figure 3.1 Prototype Model

#### Phases of Prototype Model:

### **Phase 1: Initial Communication**

In this phase, business analysts and other individuals responsible for collecting the requirements and discussing the need for the product, meet the stakeholders or clients.

### **Phase 2: Quick Plan**

Once basic requirements have been discussed, a quick plan of the initial prototype is made.

### **Phase 3: Modeling Quick Design**

User interface part i.e. designing part of the prototype is carried out in this phase.

### **Phase 4: Development of the Prototype**

In this phase, the designed prototype is coded and developed.

### **Phase 5: Deployment, Delivery, and Feedback of the Prototype**

In this phase, the initial prototype is deployed and is accessible to clients for its use. Clients review or evaluate the prototype and they provide their feedback to the requirements gathering and development teams. Phases keep repeating until the replica of the final product is deployed.

### **Phase 6: Final Product Design, Implementation, Testing, Deployment, and Maintenance**

Once the client finalizes a prototype, on the basis of the prototype, the final product is designed and developed. This developed product is tested by the testing team and if it is ready to go LIVE, the product is deployed and is available for end-user.

(artoftesting,2022)

### 3.4 GANTT CHART

### 3.5 CONCLUSION

The conclusion is basically shows about the flow of the system and the design of the database. It also shows concept how this system will be design.

## **CHAPTER 4**

### **DESIGN & DEVELOPMENT**

#### **4.1 INRODUCTION**

In this chapter we will talk about the project design and the implementation of the project which is describe about the project such as user interface of the project.

#### **4.2 PROJECT IMPLEMENTATION**

Implementation is necessary to utilize a design that has been compiled into a concrete form. The project was built using HTML, CSS, JavaScript, and PHP.

## 4.4 CONCLUSION

This chapter shows the screenshot of the project of Food Ordering KUIS.

## **CHAPTER 5**

### **CONCLUSION AND RECOMMENDATION**

#### **5.1 INTRODUCTION**

Food Ordering KUIS can be useful to café owner in KUIS, student, lecturer and staff. Café owner can use it to see their sales history, organize order and etc. Customer can use it to order food without having to queue at the café.

#### **5.2 LESSON LEARNED**

During this project, I've learned that it is important to manage your time. Other than that, I've got to learn many functions and syntax in PHP. I've enjoy learning all of new things. This help in improving my discipline and ability to multitask.

#### **5.3 RECOMMENDATION FOR FUTURE PROJECT CONTINUATION**

We hope that Food ordering KUIS can be improve into more functionality in customizing order so that it will be much easier for customer to customizing their order to their likes.

## **5.4 CONCLUSION**

What can be conclude for this software are this project need to be maintained and modified for creating features and make it more interactive.
